Exercise 4: Creating and Configuring a Maven Project

package com.example.mavenprojectdemo;

import org.springframework.web.bind.annotation.GetMapping;

import org.springframework.web.bind.annotation.RestController;

@RestController

public class HelloController {

  @GetMapping("/hello")

  public String hello() {

    return "Hello from Maven Spring Boot Project!";

  }

}

OUTPUT:

Hello from Maven Spring Boot Project!
